

In Year 2, we finished our unit on plants. It has been amazing fun learning about what plants need to grow and linking it to living things and their habitats. We planted some wheat barley and watched as it germinated and grew within days. It was incredible to watch it move and bend towards the sunlight from the window. We sent some time outside looking at how the plants around us are waking up and starting to bud or sprout leaves because the conditions are warmer and there is more light in Spring. The best part has been growing our own beans on the class window and discussing our observations when writing our bean diaries. We have taken our beans home to continue growing them in our gardens.
