

L.O. To explore the suitability of different material for road surfaces.

In Science, we have been exploring everyday materials and their uses. We were investigating different materials that are used because of their suitability to the purpose. We explored how cars could travel across everyday materials like sand, mud, rocks, grass and the pros and cons of each material. We discussed and predicted which materials would be suitable or unsuitable, then we used cars to test our predictions. It was super fun!

This is building towards learning about a significant inventor ‘John McAdam’ and his revolution of how roads were built used Macadamisation.
